

FinOps Services for Public Sector

Anglepoint FinOps delivers compliant cloud cost visibility, accountability, waste reduction, and ROI.

Collaborative Cloud Cost Governance

We help federal, state, and local agencies assess their current cloud cost maturity, define desired outcomes, and create a **structured FinOps roadmap** – from “crawl” to “walk” to “run” – aligned with the agency’s mission objectives. We help establish governance and accountability processes that bring together finance, engineering, procurement, and IT teams to ensure decisions about cloud spending are collaborative and data-driven: fundamental to FinOps success.

Following the crawl-walk-run framework, we offer **low-cost workshops** to bring together key stakeholders across the agency to understand the many parts of Cloud Management, define roles and responsibilities, and align on the vision for the FinOps program.

The Top-10 FinOps challenges we solve together:

- ✓ Unused, over-provisioned, or idle resources driving up costs
- ✓ Poor or inconsistent tagging and cost attribution practices
- ✓ Difficulty forecasting future spend and aligning with budgets
- ✓ Teams working in silos with limited financial accountability
- ✓ Unclear ownership of cloud costs across teams
- ✓ Missed savings opportunities during vendor negotiations
- ✓ Difficulty establishing repeatable FinOps governance and operating practices
- ✓ Lack of anomaly detection/management processes for unexpected spend
- ✓ Limited FinOps expertise and stakeholder training
- ✓ Difficulty managing SaaS and AI-related cloud investments within FinOps

Real Experts. Remarkable Results.

These results are based on aggregated Anglepoint client outcomes from 2021-2025.
